

Keyboard shortcuts

These are the default KDE Plasma shortcuts, since that's the desktop environment Bazzite's desktop edition uses, and every one of them can be changed under System Settings, Shortcuts. Meta refers to the key with the Windows-style logo on most keyboards.

Text and document shortcuts are standard across nearly every application, not just KDE's own. File shortcuts apply mainly inside Dolphin and file dialogs.

Getting around

Meta	Opens the application launcher and search.
Alt+F2 / Alt+Space	Opens KRunner, a quick launcher for apps, calculations, and commands.
Alt+Tab	Switches between open windows.
Alt+Shift+Tab	Switches between open windows in reverse order.
Ctrl+Esc	Opens System Activity, a live view of running processes and resource usage.

Managing the active window

Alt+F4	Closes it.
Ctrl+Q	Quits the application entirely, closing all of its windows.
Ctrl+Alt+Esc	Force-quit a frozen application by clicking on it.
Alt+F3	Opens that window's own operations menu — move, resize, keep on top, and similar.
Meta+Up	Maximizes the active window.
Meta+Down	Minimizes it.
Meta+Left	Tiles it to the left half of the screen.
Meta+Right	Tiles it to the right half.

Virtual desktops and activities

Ctrl+F1 - Ctrl+F4	Jump directly to virtual desktop one through four.
Ctrl+F9	Shows every window on the current virtual desktop at once.
Ctrl+F10	Shows every window across every virtual desktop at once.
Ctrl+F7	Shows only the windows belonging to the current application.
Ctrl+F12	Shows the desktop by minimizing everything at once.
Meta+Tab	Switches to the next Activity, a broader concept than a virtual desktop, each with its own layout and set of apps.
Meta+Shift+Tab	Switches to the previous Activity.
Meta+Q	Opens the Activities manager.

Seeing and zooming

Meta+=	Zooms in on the whole desktop.
Meta+-	Zooms back out.
Meta+0	Resets the zoom to normal.
Meta+P	Switches between display configurations, useful right after connecting or disconnecting an external monitor.

Getting help

F1	Opens the help manual for whatever application is focused.
Shift+F1	Turns on What's This mode — click any element on screen to learn what it does.

Working with text and documents

Ctrl+A	Selects all.
Ctrl+Z	Undoes.
Ctrl+Shift+Z	Redoes.
Ctrl+X	Cuts.
Ctrl+C	Copies.
Ctrl+V	Pastes.
Ctrl+N	Starts a new document or window.
Ctrl+S	Saves.
Ctrl+P	Prints.
Ctrl+F	Finds.
Ctrl+W	Closes the current document or tab.
F5	Refreshes.

Working with files

Alt+Left	Goes back.
Alt+Right	Goes forward.
Alt+Up	Goes up to the folder containing the current one.
Alt+Home	Jumps to the home folder.
Ctrl+L	Lets you type a location to jump straight to it.
Ctrl+H	Toggles whether hidden files and folders are shown.
Ctrl+Shift+A	Inverts the current selection.
Delete	Moves the selected item to the trash.
Shift+Delete	Deletes it permanently, skipping the trash.
F2	Renames the selected file.
Ctrl+Shift+N	Creates a new folder.
F4	Opens a terminal panel embedded right inside the file manager window.

Locking and leaving

Ctrl+Alt+L	Locks the screen.
Ctrl+Alt+Delete	Opens the leave screen, with options to log out, restart, or shut down.

Screenshots

Print Screen	Opens Spectacle, the built-in screenshot tool, for capturing the full screen or a chosen region.
---------------------	--

The full list, and the ability to customize any of these, lives under System Settings, Shortcuts, Global Shortcuts.
